1. Introduction

The first part of this project is to test the website and detect some possible bugs and functionalities of the site. Testing is done by: Berina Crnčalo and Faris Isaković.
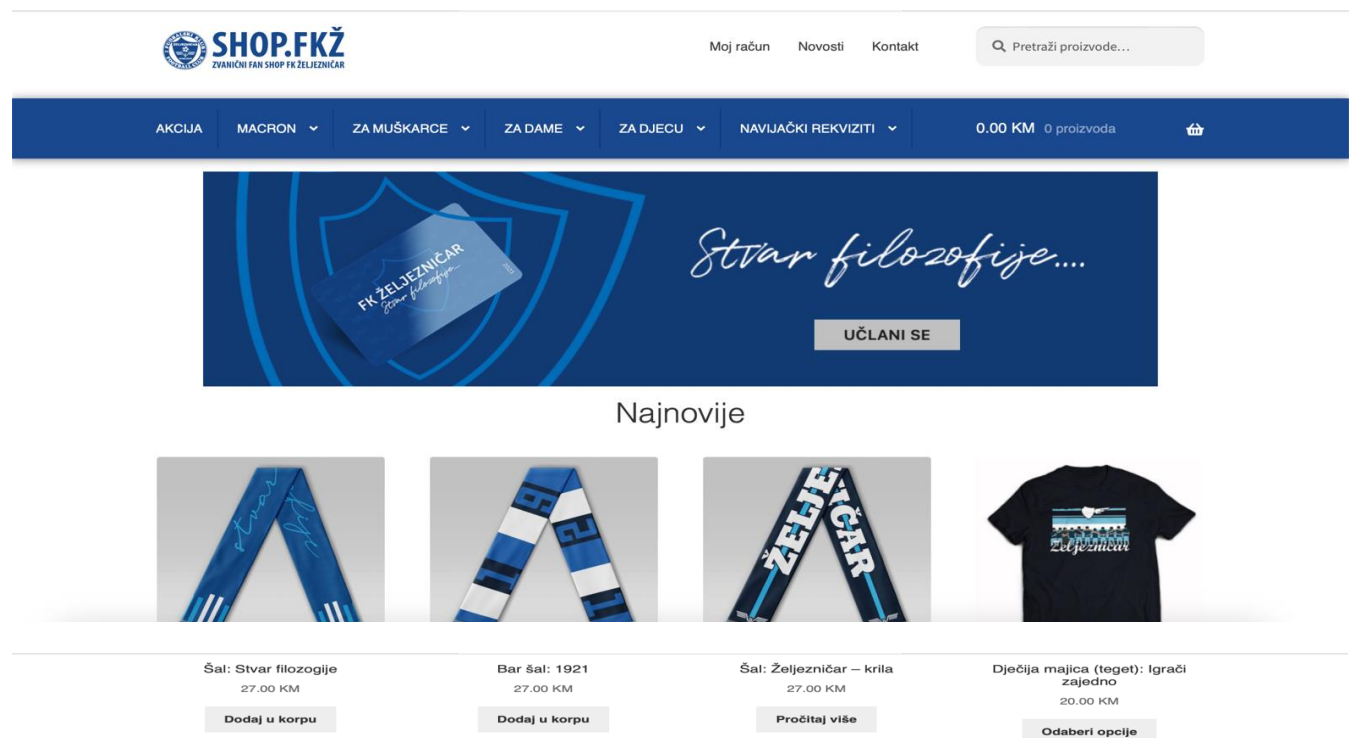

1.1. About the Project

The project we are testing is the official website of **FK Željezničar (link: https://fkzeljeznicar.ba**), a Bosnian professional football club based in Sarajevo. The website is a comprehensive platform that provides information about the club, its history, news, fixtures, players, and results. You can also purchase club merchandise from their online store. The website is well-organized and easy to navigate.

1.2. Project Functionalities and Screenshots

SHOP.FKZ:

One of the most interesting things on the website is the fan shop. A place where you can buy a hoodie, t-shirt, accessories/souvenirs/gifts/fan props, or jerseys. The latest things on the shop home are the newest things items in the shop and featured items (scarves and t-shirts). The shirts have different sizes, and you can choose how many you want.

Dolfarm – Izvještaj o povredama

Pratite zdravstveno stanje fudbalera našeg Željezničara, o kakvim se povredama radi, te koliko će pauzirati. Trajanje oporavka je procjena medicinskog tima, a oporavak može trajati kraće ili duže u odnosu na napisano.

2. Bug Report Example

Description

When we wanted to check out player injuries, while reading through them we noticed the exact same list is repeated at the end of first list, everything is the same, but overall, like written two times instead of one.

Steps to check out the bug:

1. Go to website: https://fkzeljeznicar.ba
2. Make your way to the option first team, which is second on the navigation bar, with the cursor pointer without clicking and you will be shown options to see players, expert team, and Dolfarm-injury reports.
3. Select the third option, Dolfarm-injury reports.
4. Scroll through tables of injuries and details of reports.

Expected result:

Listed reports of player injuries, with names, dates of injury, detailed explanations, number of recovery days and injury type.

Actual result:

Listed reports of player injuries, with names, dates of injury, detailed explanations, number of recovery days and injury type, but when scrolling through injuries, there should have been one list **only** report and not the same ones repeating two times
